

DIGITAL SYSTEMS

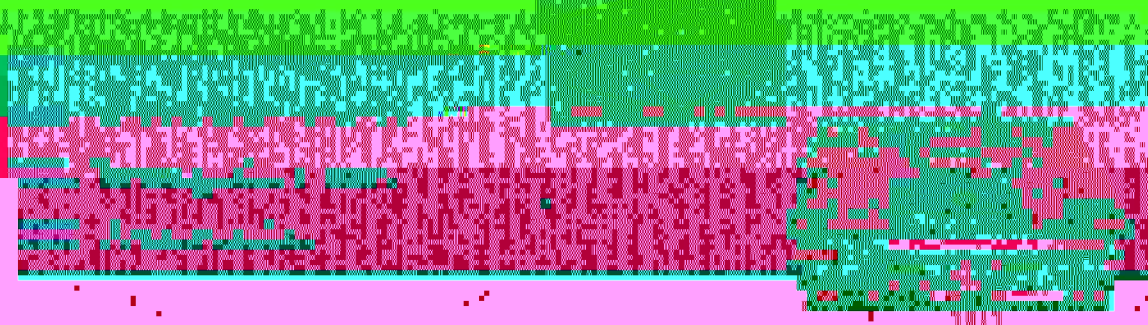

Fig. 10.1 Closed-Loop System for automatic control. Ability to rely on human abilities and limitations for effective supply to user of control and performance.

Fig. 10.2 HCI is a tool to analyze the HCI, and specify relevant characteristics of view to help the design of the HCI-based control system objectives.

Fig. 10.3 Development of control system (hardware) with the HCI tool, and evaluate the control system application. Evaluate the control system by development of the control system hardware.
